                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence is that of fusion protein TNPRFC comprising the extracellular domain of tumour necrosis factor (TNF) fused via a hinge region to the Fc part of the heavy chain of human IgG1. It may be used as part of a cell free receptor binding test which can be used for the identification of agonists, antagonists, antibodies, biological activity of soluble cellular receptors, functional analysis of modified ligands and diagnostic or therapeutic substances.                                                                                                                                                                                                                                                                                                                                                                     δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  is contained in expression vector pCAV/NOT-TMFR (ATCC 68088). A
crecombinant chimeric antibody may be produced having TMFR sequences
csubstituted for the variable domains of either or both of the
immunoglobulin molecule heavy and light chains and having
unmodified constant region domains. A specific example of a TMFR/FC.
cfusion protein is given in 045252/FS1003. The rhu TMFR/FC fusion
cgene was created by ligating the following fragments into a cloning
vector: 1) an 867 bp Asp718-Pvu2 fragment from pCAV/NOT-TMFR (ATCC
cf0088) contg. the cDNA encoding the truncated TMFR. 2) a 700 bp
cstyl-Spel fragment from plasmid plxy498 coding for 232 AAs of the
cyector contg. the FC fragment of human IgG1. 3) An oligo linker, to
cfuse the truncated TMFR with the human IgG1 FC fragment. This
linker was created by PCR using primer 045225, which encodes the 3'
cend of the truncated TMF receptor and the 5' end of human IgG1,
and primer 045227, which is an antisense sequence encoding bps
cc 257-237 of human IgG1.
                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                      region. The invention provides the use of Fas antagonist as an agent for the treatment and prevention of apoptosis-related diseases. The Fas antagonist can be a partial Fas antigen peptide containing the extracellular part of the protein, but lacking the signal sequence, an anti-Fas antibody, or an anti-Fas ligand antibody, where the antibody is preferably a humanised antibody. The Fas antagonist is used in the treatment and prevention of diseases such as myocardial infarction, heart failure, ischemic heart disease, acute kidney failure, graft-versus-host disease, ischemic restenosis of the heart, liver or kidney, and endotoxic shock, and also as an organ preservative in transplantation. The agent is of low toxicity but effectively inhibits the Fas/Fas ligand
                                                                                                                                                                                                                                                                                                                                                                                                                         26-SEP-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is a Fas antigen derivative/IgG1 Fc fusion, which contains a Fas antigen extracellular region lacking fusion, which contains a Fas antigen extracellular region from the amino-terminal to (but excluding) the 1st cysteine residue amino-terminal to (but excluding) the 1st cysteine residue (preferably at least 29 residues are deleted). The derivative is an effective regulator of apoptosis and can be used (either by administration of the polypeptide, or by the use of the coding DNA in gene therapy) to treat a range of diseases, e.g. diabetes, arthritis, lupus and in particular viral diseases such as hepatitis, influenza and HIV, by modulating apoptosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fas antigen derivative containing modified extracellular region - has low antigenicity, promotes apoptosis and is useful in treatment of viral and other diseases  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1}{2} \int_{-\infty}^{\infty} \frac{

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This plasmid encodes an OX40/Fc antibody fragment mutein protein, and is used to express a solubie OX40/Fc mutein fusion protein for use in detecting cDNA clones encoding a OX40 ligand. The Fc fragment may be derived from human IgG1, and the plasmid may be used to transform the CY1/EBNA (ATCC CRI 10478) monkey kidney cell line. Culture supernatant was purified by affinity chromatography and this was used, together with labeled goat anti-human IgG to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 2; Column 35-38; 26pp; English.

                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                               The present sequence represents the OX40/Fc fusion protein that contains the extracellular domain of mouse OX40 fused to the mutated FC region of the human IgG1 antibody. The fusion protein was used for detecting cDNA clones encoding an OX40 ligand. The invention claims for a murine OX40-L cytokine (W48975) that binds to the murine T cell antigen, OX40. The OX40-L protein is claimed to be useful for co-stimulation of T-cell production and in binding assays for detecting OX40 or its homologues. The OX40-L protein is also claimed
                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                               Purified polypeptide OX-40 ligands - for co:stimulation production and binding assays for OX-40 and homologues

                        The present sequence represents a fusion protien of the extracellular domain of a murine polypeptide, which a member of the cell development cycle protein family known as the Delta family of mammalian membrane surface-bound ligands, and the human immunoglobulin ([193]) FC portion. The murine delta-related protein gene is expressed within vascular endothelium indicates a role for the polypeptides in the control of endothelial cell biology. The murine polynucleotide was identified from a white adipose tissue cDNA library. The polypeptide is useful for identifying receptors, which bind to and/or are activated by the polypeptide. The polynucleotide is useful for identifying receptors, which bind to and/or are activated by the polypeptide. The polynucleotide is useful in gene therapy of cerebral autosomal dominant ateriopathy with subcortial infarcts and

XX Integrin-immunoglobulin chimeric protein heterodimer complexes as PT platelet substitutes - contain the alpha and beta integrin chains PT platelet substitutes - contain the alpha and beta integrin chains PT platelet substitutes - contain the alpha and beta integrin chains PT presence of plasma components

XX Integrin-immunoglobulin chimeric protein heterodimer complexes that CC comprise an integrin alpha or beta chain associated with an immunoglobulin light or heavy chain. These chimeric proteins form CC immunoglobulin chain and an immunoglobulin chain; the protein beta chain and an immunoglobulin chain; CC the immunoglobulin chain in the ach case may be a heavy chain, or one of the CC many be a light chain. The integrin alpha chain is preferably alpha 4 crainpha 2 and the integrin beta chain is preferably beta 1. Animal cells transformed with vectors containing the DNA coding for the above chimeric CC proteins can be used in the preparation of the chimeric proteins and CC their heterodimer complexes. The heterodimer complexes, which are useful CC integrins to their ligands, function as blood platelet substitutes and CC integrins to their ligands, function as blood platelet substitutes and SQ Sequence 963 AA;

The cencoded protein is an example of a protein of the invention, which are isolated TGF-beta receptor fusion proteins that competitively inhibit bladding of TGF-beta receptor fusion proteins that competitively inhibit bladding of TGF-beta to TGF-beta receptor. The fusion protein can be used in a method for lowering the levels of TGF-beta in an individual having arthritis. It can also be used to treat medical conditions such as fibroproliferative disorders. The fibroproliferative disorder is a kidney, intraocular or pulmonary fibrosis, especially selected from diabetic nephropathy, glomerulonephritis, proliferative treat collagen vascular disorders, including systemic scherosis, polymyositis, scleroderma, dermatomyositis, and systemic scherosis, polymyositis, scleroderma, dermatomyositis, and systemic lupus erythematosus. They can also be administered following coronary

Y54063
      The present sequence represents a splice variant of a rabbit transforming growth factor-beta (TGF-beta) type II receptor fused to the Fc portion of human IgG1. The fusion protein has higher affinity for TGF-beta than fusion proteins comprising the non-variant form of the receptor. The fusion protein contains soluble TGF-beta receptor constructs that are devoid of a transmembrane region (and are secreted from the cell) but retain the ability to bind TGF-beta. The protein competitively inhibits binding of TGF-beta to cellular receptors and/or forms an inactive complex with TGF-beta. The protein is used to reduce levels of TGF-beta, for treatment of arthritic conditions associated with overexpression of TGF-beta, especially fibroproliferative diseases, e.g. renal,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Splice variant; rabbit; transforming growth factor-beta; TGF-beta; type II receptor; Fc portion; human IgG1; fusion protein; arthritis; fibroproliferative disease; renal; intra-ocular; pulmonary; fibrosis; diabetic nephropathy; glomerulonephritis; collagen vascular disease; proliferative vitreoretinopathy; myelofibrosis; systemic sclerosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invertion. Name alpha proteins can be used: (a) to identify complexues that bind specifically to it (potential agonists and country) and to purify such compounds; (b) to modulate response of cells to neurotraphic factor receptor (GDNFR alpha) may be used the same way); (c) to increase the half-life of cognate ligands (especially NTN); (e) diagnostically to determine serum levels of its ligands; and (f) as can final feed additive or molecular weight marker. NTNR-alpha, its genes, (c) for treating conditions related to abnormal NTN activity or response, particularly neurological (central or enteric), renal or haematopoietic (spleen) diseases or injuries. Ab may be agonists or immunoassay cand affinity purification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

NTNR alpha binds neurturin. The NTNR alpha nucleic acid molecule is useful for the expression of NTNR alpha, which may be used to identify agonist and antagonist compounds having therapeutic applications, such
                                                                                                                                                                                                                                                                                                                                                                                                                                                    as enhancing splenic haematopoiesis, treating anaemia, thrombocytopaenia, hypoplasia, or haemorrhage. The present sequence is a NTNR alpha and IgG (immunoglobulin G) fusion protein from the

                                                                                                                                                                                                                                      extracellular domain of a mammalian oxidized LDL (low density lipoprotein) receptor, fused to a partial heavy chain of a mammalian immunoglobulin containing all or part of the constant region. Oxidized LDL is a denatured form of LDL occurring in patients having arteriosclerosis or hyperlipidaemia, and the fusion peptide can be used for the assay of oxidized LDL in biological samples from such patients, for the diagnosis of the disorders. It can also be used therapeutically for the prevention and treatment of arteriosclerosis and hyperlipidaemia. The present sequence represents a chimeric protein immunoglobulin IgGl Fc region.

09-JUN-1997;
       The present sequence represents rat neurturin receptor alpha (NTNR-alpha)/Fc sequence (IFF2a) fusion protein, from an example of the present invention. NTNR-alpha proteins can be used: (a) to identify molecules that bind specifically to it (potential agonists and antagonists) and to purify such compounds; (b) to modulate response of cells to neurturin (NTN); (c) to increase survival of Ret-expressing cells or to activate Ret on the surface of cells (soluble glial derived neurotrophic factor receptor (GDNFR alpha) may be used the same way); (d) to increase the half-life of cognate ligands (especially NTN); (e) diagnostically to determine serum levels of its ligands; and (f) as animal feed additive or molecular weight marker. NTNR-alpha, its genes, (ant)agonists and antisense nucleic acids, are useful in vivo or ex vivo for treating conditions related to abnormal NTN activity or response, particularly neurological (central or enteric), renal or haematopoietic
                                                                                                                                                                                                                                                              New polypeptide(s) based on human neurturin receptor alpha and related nucleic acid - useful for increasing survival of ret-expressing cells for treating e.g. neurological, renal and haematological diseases
                                                                                                                                                                                                                                                                                                                                        N-PSDB;

NTNR alpha binds neurturin. The NTNR alpha nucleic acid molecule is useful for the expression of NTNR alpha, which may be used to identify agonist and antagonist compounds having therapeutic applications, such as enhancing splenic haematopolesis, treating anaemia, thrombocytopaenia, hypoplasia, or haematomage. The present sequence is a NTNR alpha and IgG (immunoglobulin G) fusion protein from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3; Column 97-102; 78pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated nucleic acid molecule encodes a neurturin receptor-alpha amino acid sequence excluding the N-terminal signal peptide -.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               present invention.

Ig gamma-1 chain C region - synthetic
C. Species: synthetic
A; Note: Homo sapiens (man) gene engineered and express
C; Date: 06-Jan-1995 #sequence_revision 17-Mar-1997 #t
C; Accession: S31866
R; Filpula, D
submitted to the EMBL Data Library, February 1993
A; Description: Screeing method for protein-protein int
A; Reference number: S31866
A; Molecule type: mRNA
A; Residues: 1-255 <FILD
Name of the protein structure of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C;Species: Homo sapiens (man)

C; Complex: An immunoglobulin heterotetramer subunit consists of two identical C; Complex: An immunoglobulin heterotetramer subunit consists of two identical hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associated by the subunit consists of two identical c; Superfamily: immunoglobulin C region; immunoglobulin homology C; Seywords: duplication; glycoprotein; heterotetramer; immunoglobulin f; 20-85/Domain: immunoglobulin homology <IM1>
F; 133-202/Domain: immunoglobulin homology <IM2>
F; 239-306/Domain: immunoglobulin homology <IM3>

Ig gamma-3 heavy chain disease proteins - human
C;Species: Homo sapiens (man)
C;Date: 31-Dec-1979 #sequence_revision 23-Oct-1981 #text_change 16-Jul-1999
C;Accession: A90442; A90219; A90199; A93915; A02149
R;Frangione, B.; Rosenwasser, E.; Prelli, F.; Franklin, E.C.
Biochemistry 19, 4304-4308, 1980
A;Title: Primary structure of human gamma3 immunoglobulin deletion mutant: gamma3 heavy-A;Reference number: A90442; MUID:81021548
A;Contents: heavy chain disease protein Wis
A;Accession: A90442
A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain A;Note: the molecule is a dimer linked by 12 disulfide bonds; it has an extra interchain A;Note: the sequence of residues 42-76 was taken from the reference that follows
A;Note: the sequence of residues 42-76 was taken from the reference that follows
R;Michaelsen, T.E.; Frangione, B.; Franklin, E.C.
J. Biol. Chem. 252, 883-889, 1977
A;Reference number: A92219; MUID:77118561
A;Contents: normal gamma-3 chains, sequence corresponding to residues 12-97 of protein W
A;Accession: A92219
A;Maccession: A92219
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Residues: 1-327 <ELL>
A; Note: the sequence was determined from the germline gener, Pink, J.R.L.; Buttery, S.H.; De Vries, G.M.; Milstein, (Biochem. J. 117, 33-47, 1970
